Memo for Homework 2

I was ready with the HW way before the deadline, but the installation of the environment and the testing set up took me a lot of time. I would say that writing the HW versus installing the environment took me 5 times less.

My homework assignment is complete. I have worked and submitted every problem.

- Lines of code – lines around 30 to 40 lines of code. No comments, or white lines included.
- Lines of code in unit tests – again on both problems less than 30 lines. Not including white lines and comments.
- I have cleared my code.
- Unit test coverage – 41% (I don't know why, everything seems to run smoothly, unit test is passed)
- No cyclomatic complexity in my code.
